**Satellite**, *Co-Founder, Software Engineer*

2020 - present

<https://satellite-baas.github.io/>

Satellite is a multi-instance backend-as-a-service (BaaS) that provides the essential features of data persistence, frontend hosting, and a GraphQL API without the complexities of managing and configuring servers. Built with Node.js, Express, Kubernetes, Docker, React, and DGraph.

- Worked with a remote team to create the core Satellite app and infrastructure
- Co-built the Satellite core app for deploying Satellite backends
- Designed the Admin GUI for managing and deploying Satellites using React
- Created methods for checking Satellite health and status
- Integrated the Admin GUI with the Satellite core app and Kubernetes cluster
- Contributed to architectural decisions regarding Satellite's multi-instance infrastructure
- Co-authored technical case study, detailing Satellite's design and implementation

**Full Stack Web Developer**, *Self-Employed*

2018 - 2019

Remote. Built open-source projects using Ruby, JavaScript, Node.js, SQL, React, HTML/CSS, and Express.

- DS-Plus: an NPM package built with JavaScript that provides fast, non-native data structures
- Regexer: a Regex editor that evaluates Ruby and JavaScript expressions, built with React and Ruby
- Mello: a Trello clone built in React and Redux with a Rails API backend that supports creating, editing, and deleting boards, lists, and cards

**Educator**
